

# ESCANEAR PUERTOS CON NMAP

Nataly Castañeda

08/04/2026

| Puerto | Servicio | Versión               | Vulnerabilidad                | Descripción                                                                                                                                                         | Referencia                                                                                                                                                 |
|--------|----------|-----------------------|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 80     | HTTP     | Apache<br>http 2.4.66 | SQL Injection                 | La aplicación web no valida correctamente las entradas del usuario, permitiendo la inyección de consultas SQL maliciosas para acceder o manipular la base de datos. | Análisis basado en consulta de vulnerabilidades en National Vulnerability Database (NVD).<br><br><a href="https://nvd.nist.gov/">https://nvd.nist.gov/</a> |
| 80     | HTTP     | Apache<br>http 2.4.66 | Cross-Site Scripting (XSS)    | La falta de sanitización de entradas permite la ejecución de scripts en el navegador del usuario, comprometiendo la integridad de la sesión.                        | Vulnerabilidad verificada mediante búsqueda en Exploit Database.<br><br><a href="https://www.exploit-db.com/">https://www.exploit-db.com/</a>              |
| 80     | HTTP     | Apache<br>http 2.4.66 | Información sensible expuesta | El servidor puede revelar información sensible como versiones o rutas internas, lo que facilita ataques posteriores.                                                | Investigación apoyada en registros de CVE Details.<br><br><a href="https://www.cvedetails.com/">https://www.cvedetails.com/</a>                            |
| 80     | HTTP     | Apache<br>http 2.4.66 | Configuración insegura        | Configuraciones por defecto o mal implementadas pueden permitir accesos no autorizados o enumeración de recursos.                                                   | Consulta realizada en Vulners para identificar patrones de vulnerabilidad.<br><br><a href="https://vulners.com/">https://vulners.com/</a>                  |

## Evidencia de nmap:

Session Actions Edit View Help
kali@kali:~$ nmap 192.168.78.188
Starting Nmap 7.98 ( https://nmap.org ) at 2026-04-08 21:45 -0400
Nmap scan report for 192.168.78.188
Host is up (0.0011s latency).
Not shown: 999 closed tcp ports (reset)
PORT      STATE SERVICE
80/tcp    open  http
MAC Address: 08:00:27:D1:65:C7 (Oracle VirtualBox virtual NIC)

Nmap done: 1 IP address (1 host up) scanned in 1.10 seconds

kali@kali:~$ nmap -sV 192.168.78.188
Starting Nmap 7.98 ( https://nmap.org ) at 2026-04-08 21:46 -0400
Nmap scan report for 192.168.78.188
Host is up (0.00052s latency).
Not shown: 999 closed tcp ports (reset)
PORT      STATE SERVICE VERSION
80/tcp    open  http      Apache httpd 2.4.66 ((Debian))
MAC Address: 08:00:27:D1:65:C7 (Oracle VirtualBox virtual NIC)

Service detection performed. Please report any incorrect results at https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 7.55 seconds

kali@kali:~$ nmap -sV --script=12E8/*-*
/usr/lib/nmap/nmap: unrecognized option '--script=12E8/*-*'
See the output of nmap -h for a summary of options.

kali@kali:~$ nmap -sV --script=vuln 192.168.78.188
Starting Nmap 7.98 ( https://nmap.org ) at 2026-04-08 21:50 -0400
Nmap scan report for 192.168.78.188
Host is up (0.00057s latency).
Not shown: 999 closed tcp ports (reset)
